

The `texdepends` package*

Vincent DANJEAN

2008/01/28

Abstract

This package allows L^AT_EX to automatically generate dependencies while compiling documents.

*This file has version number Automatic, last revised 2008/01/28.

1 Introduction

This package automatically generates dependancies on L^AT_EX files and packages, figures, bibliography files, glossary and index files. The generated file is then used by a Makefile to handle dependancies.

2 Implementation of `texdepends`

2.1 Options

```
1 <*package>
texdepends is easier to write with the ifthen package.
2 \RequirePackage{ifthen}

debug The debug option (enable debug messages, useful for debugging)
3 \newboolean{TD@debug}
4 \newcommand{\TD@option@debug}[1][true]{%
5   \%PackageWarningNoLine{texdepends}{Setting debug to #1}%
6   \setboolean{TD@debug}{#1}%
7 }%

extension The extension option. We can use it to let texdepends know whether we compile
a dvi or a pdf file.
8 \def\TD@option@extension[#1]{%
9   \%PackageWarningNoLine{texdepends}{Using extention #1}%
10  \def\TD@extention[#1]%
11 }%
```

Managing options with specific code. Using the `keyval` package could be a solution, but this would add one more dependency.

```
12 \def\TD@option@split#1=#2=#3\relax{%
13   \def\TD@option@name{#1}%
14   \ifx\TD@option@name\empty\else
15     \expandafter\let\expandafter\TD@option@cmd
16       \csname TD@option@\TD@option@name\endcsname
17     \%PackageWarningNoLine{texdepends}{1: '#1', 2: '#2', 3: '#3'}%
18     \ifx\TD@option@cmd\relax
19       \@unknonoptionerror%
20     \else
21       \ifx\@empty#3\empty
22         \TD@option@cmd\relax%
23       \else
24         \def\TD@option@value{#2}%
25         \TD@option@cmd[\TD@option@value]%
26       \fi
27     \fi
28   \fi
29 }%
```

All option are managed by the same code.

```
30 \DeclareOption*{%
31   \%PackageWarningNoLine{texdepends}{\Option \CurrentOption}%
32   \expandafter\TD@option@split\CurrentOption==\relax%
33 }%
```

So lets process options

```
34 \ProcessOptions
```

2.2 Tools

Some macros to help development

2.2.1 Debug/info wrapper

\TD@warning To write a warning

```
35 \newcommand{\TD@warning}[1]{%
36   \%PackageWarningNoLine{texdepends}{#1}%
37 }%
```

\TD@warningLine To write a warning with line info

```
38 \newcommand{\TD@warningLine}[1]{%
39   \%PackageWarning{texdepends}{#1}%
40 }%
```

\TD@info To write an info (as a warning if the debug option is set

```
41 \newcommand{\TD@info}[1]{%
42   \ifthenelse{\boolean{TD@debug}}{%
43     \%PackageWarningNoLine{texdepends}{#1}%
44   }{%
45     \%PackageInfo{texdepends}{#1}%
46   }%
47 }%
```

\TD@debug To write a message if the debug option is set

```
48 \newcommand{\TD@debug}[1]{%
49   \ifthenelse{\boolean{TD@debug}}{%
50     \%PackageWarningNoLine{texdepends}{#1}%
51   }{%
52   }%
53 }%
```

2.2.2 Writing dependencies

We open the file where we will write dependencies and other infos.

```
54 \newwrite\TD@write
55 \TD@info{Writing info in '\jobname\TD@extention.mk'}
56 \immediate\openout\TD@write\jobname\TD@extention.mk%
```

And we define a few macro to write in this file

```
\TD@print We write something in the file
57 \def\TD@print#1{%
58   \immediate\write\TD@write{\#1}%
59 }%

\TD@printClass We need a class
60 \def\TD@printClass#1{%
61   \TD@print{TD_\jobname\TD@extention _INPUTS\space += #1.cls}%
62 }%

\TD@printPackage We need a package
63 \def\TD@printPackage#1{%
64   \TD@print{TD_\jobname\TD@extention _INPUTS\space += #1.sty}%
65 }%

\TD@printInput We need a (LATEX) file
66 \def\TD@printInput#1{%
67   \TD@print{TD_\jobname\TD@extention _INPUTS\space += #1}%
68 }%

\TD@printFig We need an XFig file
69 \def\TD@printFig#1{%
70   \TD@print{TD_\jobname\TD@extention _FIGURES\space += #1}%
71 }%

\TD@printSubfig We need a subfig file (see figlatex.dtx)
72 \def\TD@printSubfig#1{%
73   \TD@print{TD_\jobname\TD@extention _SUBFIGS\space += #1}%
74 }%

\TD@printRequiredFile A file is missing. texdepend will try to skip it this time, but it will be needed at
the next compilation
75 \def\TD@printRequiredFile#1{%
76   \TD@print{TD_\jobname\TD@extention _REQUIRED\space += #1}%
77 }%

\RequireFile LaTeX users can directly declare a dependency
78 \let\RequireFile\TD@printRequiredFile

\TD@printOut We write in a file
79 \def\TD@printOut#1{%
80   \TD@print{TD_\jobname\TD@extention _OUTPUTS\space += #1}%
81 }%

\TD@printGraphicspath We modify the graphicspath
82 \def\TD@printGraphicspath#1{%
83   \TD@print{TD_\jobname\TD@extention _GRAPHICSPATH\space := #1}%
84 }%
```

```

\TD@printBibfile We use a bibfile (*.bib)
85 \def\TD@printBibfile#1{%
86   \TD@print{TD_\jobname\TD@extention _BIBFILES\space += #1.bib}%
87 }%

\TD@printBibstyle We use a bibstyle file (*.bst)
88 \def\TD@printBibstyle#1{%
89   \TD@print{TD_\jobname\TD@extention _BIBSTYLES\space += #1 bst}%
90 }%

\TD@printBblfile We use a bibliography file (*.bb1)
91 \def\TD@printBblfile#1{%
92   \TD@print{TD_\jobname\TD@extention _BBLFILES\space += #1.bb1}%
93 }%

\TD@printRebuildRule We need a specific rule in the Makefile to check if a rebuild is needed
94 \def\TD@printRebuildRule#1{%
95   \TD@print{TD_\jobname\TD@extention _REBUILD_RULES\space += #1}%
96 }%

\TD@printIndex We use a new index
97 \def\TD@printIndex#1{%
98   \TD@print{TD_\jobname\TD@extention _INDEXES\space += INDEX}%
99   \TD@print{TD_\jobname\TD@extention _INDEXES_INDEX\space += #1}%
100 }%

\TD@printIndexSource The index file filled by LATEX
101 \def\TD@printIndexSource#1#2{%
102   \TD@print{TD_\jobname\TD@extention _INDEX_#1_SRC\space = #2}%
103 }%

\TD@printIndexTarget And the index file read by LATEX after makeindex processing
104 \def\TD@printIndexTarget#1#2{%
105   \TD@print{TD_\jobname\TD@extention _INDEX_#1_TARGET\space = #2}%
106 }%

\TD@printIndexStyle The index style to be used with makeindex (never called for now)
107 \def\TD@printIndexStyle#1#2{%
108   \TD@print{TD_\jobname\TD@extention _INDEX_#1_STYLE\space = #2}%
109 }%

\TD@printGlossary And the same things for glossary. Its name
110 \def\TD@printGlossary#1{%
111   \TD@print{TD_\jobname\TD@extention _INDEXES += GLOSS}%
112   \TD@print{TD_\jobname\TD@extention _INDEXES_GLOSS\space += #1}%
113 }%

```

```

\TD@printGlossarySource The glossary file filled by LATEX
114 \def\TD@printGlossarySource#1#2{%
115   \TD@print{TD_\jobname\TD@extention _GLOSS_#1_SRC\space = #2}%
116 }%

\TD@printGlossaryTarget And the glossary file read by LATEX after makeindex processing
117 \def\TD@printGlossaryTarget#1#2{%
118   \TD@print{TD_\jobname\TD@extention _GLOSS_#1_TARGET\space = #2}%
119 }%

\TD@printGlossaryStyle The glossary style to be used with makeindex (never called for now)
120 \def\TD@printGlossaryStyle#1#2{%
121   \TD@print{TD_\jobname\TD@extention _GLOSS_#1_STYLE\space = #2}%
122 }%

```

2.2.3 Diverting a macro

```

\TD@switch \TD@switch replace the macro '#1' by the macro \TD@#1. The original macro is
stored in the \TD@orig@#1 macro. Nothing is done if '#1' is already \TD@#1 (that
is if \TD@switch is called several times with the same argument)
123 \def\TD@switch#1{%
124   \expandafter\let\expandafter\TD@local@old\csname#1\endcsname%
125   \expandafter\let\expandafter\TD@local@new\csname TD@#1\endcsname%
126   \ifx\TD@local@old\TD@local@new
127     \PackageWarning{texdepends}{#1 already redefined. Skipping it.}%
128   \else
129     \ifx\TD@local@old\relax
130       \TD@warning{Diverting empty macro '#1' \MessageBreak%
131                   Probably a bug in texdepends.sty}%
132     \else
133       \TD@info{Diverting macro '#1'}%
134     \fi
135   \expandafter\let\csname TD@orig@#1\endcsname\TD@local@old%
136   \expandafter\let\csname#1\endcsname\TD@local@new%
137 \fi
138 }%

```

```

\TD@docswitch Sometimes, we want the diversion to be delayed until the start of the document.
139 \def\TD@docswitchlist{}%
140 \def\TD@docswitch#1{%
141   \TD@info{Registering macro '#1' for diversion}%
142   \ifx\TD@docswitchlist\empty%
143     \xdef\TD@docswitchlist{#1}%
144   \else%
145     \xdef\TD@docswitchlist{\TD@docswitchlist,#1}%
146   \fi%
147 }%
148 \AtBeginDocument{%
149   \TD@info{Diverting registered macros...}%
}

```

```

150  \@for\TD@cmd:=\TD@docswitchlist\do{%
151    \TD@switch{\TD@cmd}%
152  }%
153  \TD@info{Divertions done}%
154 }%

```

\TD@PackagePreDivert And then, two macros to insert command just before or after loading a package.
\TD@PackagePostDivert The first argument is the name of the package we want to add an hook before or after, and then there is the definition of the hook that will be called. Four parameters (#1, ..., #4) are available (the same as the `@onefilewithoptions` L^AT_EX macro, ie package name, options, and the two remaining ;-)).

```

155 \def\TD@PackagePreDivert#1{%
156   \expandafter\def\csname TD@PackageStart@#1\endcsname ##1##2##3##4%
157 }%
158 \def\TD@PackagePostDivert#1{%
159   \expandafter\def\csname TD@PackageEnd@#1\endcsname ##1##2##3##4%
160 }%

```

2.2.4 Initialisation

If the `extention` option is not used, we try to find ourself the good extention

```

161 \ifthenelse{\isundefined{\TDextention}}{%
162   \RequirePackage{ifpdf}%
163   \ifpdf%
164     \TD@debug{No extention set, using pdf}%
165     \def\TD@extention{.pdf}%
166   \else%
167     \TD@debug{No extention set, using dvi}%
168     \def\TD@extention{.dvi}%
169   \fi%
170 }{%
171   \TD@debug{Extention set to \TDextention}%
172   \def\TD@extention{.\TDextention}%
173 }%

```

We need to be loaded *before* `\documentclass`

```

174 \ifx\documentclass\@twoclasseserror
175   \PackageError{texdepends}{texdepends needs to be loaded BEFORE
176   \string\documentclass \MessageBreak
177 Use \string\RequirePackage\space instead of \string\usepackage
178 \MessageBreak as the later is not allowed before
179 \string\documentclass}
180 \fi

```

And we write the first dependency (upon ourself)

```
181 \TD@printPackage{texdepends}
```

We write default `graphicspath` (is this really needed ?)

```
182 \TD@printGraphicspath{.}
```

2.2.5 Warning upon missing figures

\TD@depends
\TD@dependsWarning
\TD@missingDepends If some figures are missing, \TD@missingDepends will be called so that a warning will be displayed at the end of the compilation. Figures should be generated before the next run.

```
183 \def\TD@depends{}%
184 \def\TD@dependsWarning{%
185   \PackageWarningNoLine{texdepends}{Figure(s) missing. Check
186   dependencies again}%
187 }%
188 \def\TD@missingDepends{%
189   \global\let\TD@depends\TD@dependsWarning%
190 }%
191 \AtEndDocument{%
192   \TD@depends%
193 }%
```

2.3 Diversion of L^AT_EX macros

2.3.1 Class and package loading

\TD@@fileswith@pti@ns
\TD@@@fileswith@pti@ns Diverting \@fileswith@pti@ns and @@fileswith@pti@ns so that we can track class loading. Package are tracked with an other macro (see just after).

```
194 \def\TD@@fileswith@pti@ns#1[#2]#3[#4]{%
195   \ifx#1\clsextension
196     \TD@printClass{#3}%
197   \fi
198   \TD@orig@@fileswith@pti@ns{#1}[#2]{#3}[#4]%
199 }%
200 \let\TD@@@fileswith@pti@ns\TD@@fileswith@pti@ns
201 \TD@switch{@fileswith@pti@ns}%
202 \TD@switch{@@fileswith@pti@ns}%
```

\TD@@onefilewithoptions By diverting \@onefilewithoptions, we can track all loaded packages. We write the dependency, and we look at the loaded package to see if we need some special requirements

```
203 \def\TD@@onefilewithoptions#1[#2][#3]#4{%
204   \TD@printPackage{#1}%
205   \ifthenelse{\equal{#1}{texdepends}}{%
```

The texdepends package is special : we know it has already been loaded (we are running code in it) but perhaps L^AT_EX does not know it. So we try to honor the debug option.

```
206   \TD@debug{Package '#1' detected}
207   \foreach\TD@package@option:=#2\do{%
208     \ifthenelse{\expandafter\isundefined\csname TD@option@\TD@package@option\endcsname}{%
209       \TD@warningLine{Ignoring unknown option '\TD@package@option'}%
210     }%
211     \ifthenelse{%
```

```

212      \equal{\TD@package@option}{debug}%
213      \%OR\equal{\TD@package@option}{debug}%
214  }{
215      \csname TD@option@\TD@package@option\endcsname%
216  }{
217      \warningLine{Ignoring option '\TD@package@option'}
218      \MessageBreak #1 already loaded
219  }
220 }
221 }
222 }
223 }{%
224     \expandafter\let\expandafter\TD@divert
225     \csname TD@PackageStart##1\endcsname
226     \ifx\TD@divert\relax
227         \TD@debug{No preamble for package #1}
228     \else
229         \TD@info{Preamble for package #1}
230         \TD@divert{##1}{##2}{##3}{##4}%
231     \fi
232     \TD@orig@@onefilewithoptions{##1}[##2][##3]{##4}%
233     \expandafter\let\expandafter\TD@divert
234     \csname TD@PackageEnd##1\endcsname
235     \ifx\TD@divert\relax
236         \TD@debug{No postamble for package #1}
237     \else
238         \TD@info{Postamble for package #1}
239         \TD@divert{##1}{##2}{##3}{##4}%
240     \fi
241 }%
242 }%
243 \TD@switch{@onefilewithoptions}%

```

2.3.2 Tracking input files

```

\TD@@iinput \iinput and \input@ are diverted to track loaded files
\TD@@input@ 244 \def\TD@@iinput#1{%
245     \TD@printInput{##1}%
246     \TD@orig@@iinput{##1}%
247 \def\TD@@input@#1{%
248     \IfFileExists{##1}{%
249         \TD@printInput{##1}%
250     }{}%
251     \TD@orig@@input{##1}%
252 \TD@switch{@iinput}%
253 \TD@switch{@input@}%
254 \def\TD@verbatiminput#1{%
255     \TD@printInput{##1}%
256     \TD@orig@verbatiminput{##1}%

```

```

257 \TD@PackagePostDivert{verbatim}{%
258   \TD@switch{verbatiminput}}%

```

2.3.3 Tracking output files

```

\TD@openout Note: that does not work. Currently, we parse the log file instead of using this. If
\TD@openout@eq someone has ideas...
\TD@openout@noeq 259 \let\TD@orig@openout\openout
260 \def\TD@openout#1{%
261   \ifnextchar={\TD@openout@eq#1}{\TD@openout@noeq#1}}
