```
                     ======================================
                     Installation instructions for web2c TeX      2004/11/29
                     ======================================
```

   Please check _first_ the same file name in the LaTeX sources directory
and _read_ the given instructions.

Features: many are provided by web2c, specially the "-mltex" option.
========

Distribution to install: generic for unix systems, FrenchPourUnix
======================= and then type "gmake -f GNUmakefile"

Status
======
   Web2c TeX is known to run correctly with FrenchPro.

General instructions
====================

   Read Bernard's documentation "ALIRE.pdf" (or README_x.pdf in each
directory). And just follow the instructions.

                              --
