

# The `hologo` package

Heiko Oberdiek  
<heiko.oberdiek at googlemail.com>

2010/04/24 v1.2

## Abstract

This package starts a collection of logos with support for bookmarks strings.

# 1 Documentation

## 1.1 Logo macros

`\hologo {\langle name \rangle}`

Macro `\hologo` sets the logo with name  $\langle name \rangle$ . The following table shows the supported names.

name	variant	logo	since
AmS $\mathrm{\Delta}$ TeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ - $\mathrm{\Delta}$ TeX	2010/04/16
AmSTeX		$\mathcal{A}\mathcal{M}\mathcal{S}$ -TeX	2010/04/16
eTeX		$\varepsilon$ -TeX	2010/04/08
LaTeX		TeX	2010/04/08
LaTeX2 $\varepsilon$		TeX 2 $\varepsilon$	2010/04/08
LaTeX3		TeX 3	2010/04/24
LaTeXe		TeX 2 $\varepsilon$	2010/04/08
LuaLaTeX		LuaTeX	2010/04/08
LuaTeX		LuaTeX	2010/04/08
pdfTeX		pdfTeX	2010/04/08
pdfLaTeX		pdfTeX	2010/04/08
plainTeX		plain TeX	2010/04/08
plainTeX	space	plain TeX	2010/04/16
plainTeX	hyphen	plain-TeX	2010/04/16
plainTeX	runtogther	plainTeX	2010/04/16
TeX		TeX	2010/04/08
VTeX		VTeX	2010/04/24
XeLaTeX		XeTeX	2010/04/08
XeTeX		XeTeX	2010/04/08

`\Hologo {\langle name \rangle}`

Macro `\Hologo` starts the logo  $\langle name \rangle$  with an uppercase letter.

## 1.2 Setup macros

The package does not support package options, but the following setup macros can be used to set options.

`\hologoSetup {\langle key value list \rangle}`

Macro `\hologoSetup` sets global options.

`\hologoLogoSetup {\langle logo \rangle} {\langle key value list \rangle}`

Some options can also be used to configure a logo. These settings take precedence over global option settings.

### 1.3 Options

There are boolean and string options:

**Boolean option:** It takes `true` or `false` as value. If the value is omitted, then `true` is used.

**String option:** A value must be given as string. (But the string might be empty.)

The following options can be used both in `\hologoSetup` and `\hologoLogoSetup`:

**break:** enables or disables line breaks inside the logo. This setting is refined by options `hyphenbreak` or `spacebreak`. Default is `false`.

**hyphenbreak:** enables or disables the line break right after the hyphen character.

**spacebreak:** enables or disables line breaks at space characters.

Macro `\hologoLogoSetup` also knows:

**variant:** This is a string option. It specifies a variant of a logo that must exist.  
An empty string selects the package default variant.

Example:

```
\hologoSetup{break=false}
\hologoLogoSetup{plainTeX}{variant=hyphen,hyphenbreak}
Then "plain-TeX" contains one break point after the hyphen.
```

## 2 Implementation

```
1 /*package)
```

Reload check, especially if the package is not used with L<sup>A</sup>T<sub>E</sub>X.

### 3.2 Spacefactor

The space factor must be 1000 after a logo. If it is greater 1000 then the following space is a space after a sentence closing point. If the space factor is smaller 1000 then an immediate following dot is interpreted as abbreviation, not sentence closing point.

```

856 {*test-spacefactor}
857 \NeedsTeXFormat{LaTeX2e}

## 4 Installation

### 4.1 Download

**Package.** This package is available on CTAN<sup>1</sup>:

<CTAN:macros/latex/contrib/oberdiek/hologo.dtx> The source file.

<CTAN:macros/latex/contrib/oberdiek/hologo.pdf> Documentation.

**Bundle.** All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

<CTAN:install/macros/latex/contrib/oberdiek.tds.zip>

*TDS* refers to the standard “A Directory Structure for TeX Files” (<CTAN:tds/tds.pdf>). Directories with `texmf` in their name are usually organized this way.

### 4.2 Bundle installation

**Unpacking.** Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

**Script installation.** Check the directory `TDSScripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

### 4.3 Package installation

**Unpacking.** The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain TeX:

```
tex hologo.dtx
```

---

<sup>1</sup><ftp://ftp.ctan.org/tex-archive/>

**TDS.** Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```
hologo.sty           → tex/generic/oberdiek/hologo.sty
hologo-test1.tex     → tex/generic/oberdiek/hologo-test1.tex
hologo-test-spacefactor.tex → tex/generic/oberdiek/hologo-test-spacefactor.tex
hologo.pdf          → doc/latex/oberdiek/hologo.pdf
hologo.dtx          → source/latex/oberdiek/hologo.dtx
```

If you have a `docstrip.cfg` that configures and enables `docstrip`'s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

## 4.4 Refresh file name databases

If your `TeX` distribution (`teTeX`, `mikTeX`, ...) relies on file name databases, you must refresh these. For example, `teTeX` users run `texhash` or `mktexlsr`.

## 4.5 Some details for the interested

**Attached source.** The PDF documentation on CTAN also includes the `.dtx` source file. It can be extracted by AcrobatReader 6 or higher. Another option is `pdftk`, e.g. unpack the file into the current directory:

```
pdftk hologo.pdf unpack_files output .
```

**Unpacking with L<sup>A</sup>T<sub>E</sub>X.** The `.dtx` chooses its action depending on the format:

**plain TeX:** Run `docstrip` and extract the files.

**L<sup>A</sup>T<sub>E</sub>X:** Generate the documentation.

If you insist on using L<sup>A</sup>T<sub>E</sub>X for `docstrip` (really, `docstrip` does not need L<sup>A</sup>T<sub>E</sub>X), then inform the autodetect routine about your intention:

```
\latex \let\install=y\input{hologo.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

**Generating the documentation.** You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL<sup>A</sup>T<sub>E</sub>X:

```
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
makeindex -s gind.ist hologo.idx
pdflatex hologo.dtx
```

## 5 History

[2010/04/08 v1.0]

- The first version.

[2010/04/16 v1.1]

- `\Hologo` added for support of logos at start of a sentence.
- `\hologoSetup` and `\hologoLogoSetup` added.
- Options `break`, `hyphenbreak`, `spacebreak` added.
- Variant support added by option `variant`.

[2010/04/24 v1.2]

- `LATEX3` added.
- `VTEX` added.

## 6 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
