# *Welcome to WebSPIRS*

---

WebSPIRS is software you use to search databases, like periodical indexes, via your Web browser. From your WebSPIRS search you get enough information to locate articles and materials you need. If you prepare before you sit down at the terminal, your search will produce better results:

- List the ideas and concepts that describe your search topic.
- Narrow the topic. Remember, your goal is to get a manageable number of useful records depending on your needs.
- Think of as many search terms as you can that describe your topic. You might find what you want right away, but results can improve as you become more familiar with a database.
- Write down or print your search history, you might want to use it again.

---

## *Using this Booklet*

This booklet explains the major features of WebSPIRS to help you get started searching. An image of each WebSPIRS screen and its corresponding explanation appear on opposite pages. Refer to the numbered pointers (as at left) for information on the important WebSPIRS components.

Some technical search concepts are outlined on pages 18-21.

While you are searching you can also click  for online help, including help about the databases you are searching.

When you start WebSPIRS, you might need a username and password. See your librarian or system administrator for help. Next, you can select the databases you want to search.

## Selecting Databases

The screenshot shows the WebSPIRS web application interface. At the top, there is a menu bar with options: File, Edit, View, Go, Bookmarks, Options, Directory, Window, Help. Below the menu bar is a navigation bar with buttons for Database, Search, Index, Thesaurus, Logout, and Help. The main content area is titled "Database Selection" and contains the following text:

Select one or more databases and click **Search**  
or  
Use the [Term in Database Search](#) to find out which databases contain your search terms.

**SilverPlatter - Boston ERL 2 Databases**

- Sampler: Human Nutrition
- Sampler: Immunology & AIDS
- Sampler: IPA
- Sampler: ISMEC:Mech. Eng. Abs.
- Sampler: Life Sciences
- Sampler: MDX Health Digest
- Sampler: Microcomputer Abstracts
- Sampler: Music Library
- Sampler: Nephrology
- Sampler: Newspaper Abstracts
- Sampler: Obstetrics & Gynecology
- Sampler: Pathology
- Sampler: Pediatrics
- Sampler: POLTOX I

Below the list is a "Search" button. Further down is a section titled "Term in Database Search" with the following text:

Enter the word or phrase you want to find, and click Select. WebSPIRS will list the databases that contain the term you entered.

Find:

At the bottom of the interface, there is another navigation bar with buttons for Database, Search, Index, Thesaurus, Logout, and Help. The status bar at the very bottom shows "Document: Done".

Two callout boxes are present: a triangle with the number "1" pointing to the "Sampler: Music Library" checkbox, and a triangle with the number "2" pointing to the "Find:" input field.

---

## Selecting Databases

At the Database Selection screen you select the databases you want to search. The list on this screen are those databases available from your library. There are two ways to select databases:

1. Click the checkbox next to the database. You can select as many databases as you want but too many can lead to confusing results.

You can select and search more than one database at a time, but remember:

- The databases may not have all fields in common; if you search in a specific field only records from databases with the field are retrieved.
- The Thesaurus is available only if you select a single database or multiple editions of the same database.

**Recommended:** Stick to a single database or to database families. You can always repeat a search in a different database.

2. Click . The Search screen appears.

### Narrowing the List of Databases

You can also select databases that contain a term you enter. Scroll down to see this section of the screen or click the [Term in Database Search](#) link.

1. Type your term at the Find prompt and click . A subset of databases containing your term appears.
2. Select databases from this list and click  as above.

---

If you want to select another database, click  to return to this screen.

## Searching in WebSPIRS

The screenshot shows the WebSPIRS search interface. It includes a menu bar (File, Edit, View, Go, Bookmarks, Options, Directory, Window, Help), a toolbar with buttons for Database, Search, Index, Thesaurus, Logout, and Help, and a search form. The search form has a search box containing 'jazz', search and clear buttons, and checkboxes for search criteria (Words Anywhere, Title, Author, Subject) and language (Any Language, English, French, German, Other). A '1' in a triangle points to the search box.

Below the search form, the results page is shown. It displays 'Search - Results: 7 Records' and a 'Display Records' button. The search criteria are repeated, and a '2' in a triangle points to the 'Search - Results: 7 Records' heading. The results section includes a 'Search History' table with columns for 'Include', '#', 'Search', and 'Results'. A '3' in a triangle points to the 'Search History' heading. Below the table are buttons for 'Remove', 'Retype', and 'Reset' checked searches in history, and a 'Change Display Options' button.

<input type="checkbox"/>	#2	<a href="#">#1 and PARKER-CHARLIE</a>	1
<input type="checkbox"/>	#1	<a href="#">JAZZ</a>	113

---

## Searching in WebSPIRS

The Search screen is where you type terms to search the database. To open the Search screen click . Then:

1. Type a term at the Search prompt.

A screenshot of a search interface. It shows a text input field containing the word "jazz" and a button labeled "Search" to its right.

2. Click  to start the search. WebSPIRS searches the databases you selected for your terms.

You can make your search more precise by changing the selections around the Search prompt. The options available depend on the databases you are searching.

To display the records returned by a search:

- Click the  button.
- Click the link to the search in the Search History table.

### Search Results

After a search, WebSPIRS shows the number of records found at the top of the Search screen.

- Click  to view these records immediately.
- Click the [Search History](#) link to scroll down to the Search History table.

### Search History

The Search History is a table of all of the searches you've made in a session.

- The most recent search appears at the top of the table.
- Click any link in the Search column to show the records for that search.
- Select searches by clicking the checkbox in the Include column. You can then combine selected searches to create a new search:
  1. Click **and** or **or** to find records with all of the selected searches or any of the selected search terms, respectively.
  2. Click . WebSPIRS performs the new search.
- Change a selected search by clicking the  button.
- Delete searches you've selected by clicking the  button.

## Showing Records

When you click  WebSPIRS displays the Results screen showing the records retrieved by your search.

Use   to view records in sets of ten.

You can also click  to change how records are displayed. For more about this button, see page 17. Other options on this screen are explained below.

### Marking Records

You can easily mark records in which you are interested and then work with only those records.

Check the box next to the record you want to mark. To show marked records click  button. WebSPIRS displays just your marked records.

**Note:** Click a marked record to unmark it or click **Clear Marked** to unmark all marked records.

### Using Displayed Records

Whether you marked records or want to include the whole search, you can do the following:

- Click  to save records to a file which you can then take with you.
- Click  to print records.
- Depending how WebSPIRS is setup at your site, you may be able to email retrieved records.

See pages 8-9 for an explanation of the Save screen. Printing and mailing records are similar to saving; see the online help for more details.

### Full-content Databases

Some databases contain the full-content of the article. Records in these databases have a Table of Contents to help you find the section of the record you want. To see the Table of Contents for a record, click the [Table of Contents](#) link displayed with the record. Click a heading in which you are interested. WebSPIRS displays that portion of the record.

---

## Saving Records

**WebSPIRS**

---

## *Saving Records*

You can save the records retrieved by any of your searches. Click  to open the Save Records page.

1. Under the screen heading *Which records do you want to save?* choose one:
  - **Records displayed on the previous page** to save the records on the Display Results page.
  - **First [n] records in the current search** to save the number of records you specify.
  - **Marked records** to save any records you have marked.

2. Check the **Clear Marked Records** box to unmark all records after the save is performed.

3. Records are saved exactly as they are displayed on the screen. To change the format that will be saved, click the  button (see page 17).

4. Under the heading *Include...* are the following options:
  - **Search history** saves your search history with the retrieved records. This is important if you will want to use these searches again.
  - **Record numbers** numbers each record.
5. Click  to save. Your browser displays a dialog box where you specify a drive and directory in which to save the records.

## Searching the Index

The screenshot shows the WebSPIRS interface. At the top, there is a menu bar with 'File', 'Edit', 'View', 'Go', 'Bookmarks', 'Options', 'Directory', 'Window', and 'Help'. Below the menu bar is a toolbar with buttons for 'Database', 'Search', 'Index', 'Thesaurus', 'Logout', and 'Help'. The main content area is titled 'Index for: "Free Text Fields"'. Below the title, there is a text input field labeled 'Term:' containing the text 'goodman' and a 'Display' button. Below the text input field is a dropdown menu labeled 'Field:' with 'Free Text' selected. Below the search form, there is a navigation bar with 'Previous', 'Next', a dropdown menu showing '20', and 'terms', followed by a 'Search Terms' button. Below the navigation bar is a list of search results, each with a checkbox and a term followed by a count in parentheses. The results are:  GOODMAN (12),  GOODMAN-BENNY (10),  GOODMAN-ROY (1),  GOODNIGHT (1),  GOODRUM (1),  GOODTIME (1),  GOOSE (1),  GORDAN (1),  GORDO (1),  GORDON (9),  GORDON-SMITH (1),  GORDON-SMITH-RICHARD (1),  GORE (1),  GORGEOUS (1),  GORMAN (1),  GOROGLY (1),  GOROGLY-POEM-MUSICAL-SETTINGS (1),  GORR (1),  GORR-RITA (1), and  GOSMAN (1). Below the list of results, there is another navigation bar with 'Previous', 'Next', a dropdown menu showing '20terms', and 'Search Terms'. At the bottom of the interface, there is a toolbar with buttons for 'Database', 'Search', 'Index', 'Thesaurus', 'Logout', and 'Help'. The status bar at the very bottom shows 'Document Done'.

## *Searching in the Index*

Use the Index to select terms from a list of the terms in the database. To open the Index screen, click the  button. WebSPIRS displays the Index screen.

To look through the Index:

1. Type a term in the Term: prompt.
2. Click the  button. WebSPIRS displays a list of the terms beginning with the term you typed. The parentheses indicate the number of records that contain each term.

To search for terms:

1. Scroll through the index terms on the current page, or click   to page up or down in the Index. (Change the number of index terms WebSPIRS displays at a time by selecting a number from the  list.)
2. To search for one term, click the term rather than its checkbox. WebSPIRS searches for the term automatically.
3. Or, check more terms as you scroll.
4. Click  to search for records that contain the terms you checked. If you select multiple terms, WebSPIRS combines them with the **or** operator and finds records that contain any of the terms.

### *Searching in the Thesaurus*

Some databases include a thesaurus, a standardized list of terms used to describe the records in the database. Using a thesaurus you can look up synonyms and related terms for a term, and when you find the right term, you can search the database for it.

To open the Thesaurus screen, click the  button.

You can then use one of these methods to look in the Thesaurus:

- Type a term in the Term: prompt and click the  button.
- Scroll through the index terms on the current page.
- Click   to show the previous or next range of terms.

To get information about a term:

- Click a linked term. WebSPIRS displays the Thesaurus Term page shown on pages 14-15.

## Displaying Thesaurus Terms

**1** **Thesaurus Term: Heart Defects, Congenital**

TERM NOTES:: DEFINITION OF TERM: Imperfections or malformations of the heart, existing at birth.  
TREE NUMBERS: C14.240.400; C14.280.400; C16.131.240.400

Back to subject list Search Explode [Select subheadings](#)

**2** **More Specific (narrower) Terms:**

- [Aortic Coarctation](#)
- [Cor Triatriatum](#)
- [Coronary Vessel Anomalies](#)
- [Crisscross Heart](#)

  - CEREBROSPINAL FLUID
  - CHEMICALLY INDUCED
  - CLASSIFICATION

Hold down the Shift, Ctrl, or Command key to select more than one subheading.

Search Explode

Database Search Index Thesaurus Logout Help

Document Done

---

## *Displaying Thesaurus Terms*

When you click a linked term in the Thesaurus Subject List, the Thesaurus Term Information screen is displayed.

Information about the term you selected is displayed, such as a definition, related terms, and previously used indexing terms.

Further, if the Thesaurus is arranged hierarchically, broader and narrower terms are shown. The specific information provided depends upon the database you are searching.

You can perform the following operations:

- Click **Search** to search for just the current term.
- Click **Explode** to search for the term and its narrower terms. (WebSPIRS combines terms with the **or** operator.)
- Click a broader or narrower term to get term information for that term.
- Click  to return to the Thesaurus Subject List.

### **Subheadings**

Some database thesauri include subheadings that represent specialized areas of interest. If the Thesaurus includes subheadings, WebSPIRS searches all subheadings by default. To change the subheadings, you can select the ones you want to apply. (You can use the multiple-selection method supported by your browser/platform.)

## *Changing Display Options*

You can change the display of field names and records.

Click  to display this screen.

To change display options:

1. From the **Show Field Names As** drop-down list, select *No labels*, *Short labels* (e.g. “TF”), *Long labels* (e.g. “TITLE”), or *Short and long labels*.
2. In the **Display Records With** area, select *Complete Record*, *Citation and Abstract*, *Citation Only*, *Title Only*, or *Specific Fields*. If you select *Specific Fields*, scroll through the list of fields and check those you want to display.)
3. Click the  button. The Results screen appears.

### **Sorting Records**

You can sort retrieved records by the field of your choice. For example, you can sort by author or publication date:

1. Check **Sort By**.
2. Select the field you want to sort by from the **Sort By** list.  
Select a maximum number to sort in the **Records** list. If you retrieve more records than this number, WebSPIRS does not sort the records.
3. Select **Ascending** or **Descending** sort order.
4. Make other selections (as above) and click the  button.

---

### *Combining Terms with Operators*

Operators are words you use to combine terms into a more complex search. In a search, use this format:

*<first term> <operator> <second term>*

These are the operators you can use:

- and** finds records with both search terms. For example, *dyslexia and child* retrieves records with both *dyslexia* and *child*.
- or** finds records with either or both search terms. For example, *dyslexia or learning disabilities* retrieves records with *dyslexia*, *learning disabilities*, or both *dyslexia* and *learning disabilities*.
- with** finds records with both search terms in the same field. For example, *dyslexia with research* retrieves records with both *dyslexia* and *research* in a single field.
- near** finds records with both search terms in the same sentence. For example, *dyslexia near treatment* retrieves records where *dyslexia* and *treatment* appear in the same sentence (in any order).

Add a number to **near** to specify exactly how close the terms should be. For example, *language near2 computer* retrieves records containing *language* within two words of *computer*, in any order, in the same sentence.

- not** finds records with the first of two search terms, but not the second. For example, *truman not capote* retrieves records with *Truman*, *excluding Capote* (references to the president but not the writer.)

Use this operator carefully. It can also eliminate useful records. For example, *dog not puppy* misses records that discuss both *dog* and *puppy*.

**Note:** Begin a term with an operator to combine the term with the previous one. For example, if the first search is *radio-tagging*, searching for *and frogs* gives you the same results as *radio-tagging and frogs*. Similarly, the search *red tide* followed by the search *in ti* is the same as *red tide in ti*.

---

### *Truncation and Wildcards*

Use truncation and wildcards to retrieve variations of your search term.

The truncation symbol (\*) substitutes for a string of zero or more characters. For example, the search `cat*` retrieves *catatonic*, *catatonia*, *category*, etc.

The wildcard symbol (?) substitutes for one character or none. For example, the search `m?cdonald` retrieves both *mcdonald* and *macdonald*.

Use truncation or wildcards anywhere in your search term, except as the first character.

---

### *Searching in a Specific Field*

To make your search more precise, you can limit it to a particular field. For example, `freud in au` retrieves items written by *Freud*. Some fields you can specify by checking the appropriate box in the area of the screen near the Search prompt. You can also type the search directly using this format:

*<term> in <field label>*

Use the online help for a list of fields in a database.

---

### *Separately Indexed Fields*

Generally, every field in a SilverPlatter Database is indexed in a single, large list of terms, the free-text index. However, some fields are indexed separately. For example, authors and publication dates are often indexed separately.

You can search either type of index from the Index screen:

1. In the Field: list, select the index you want to see.
2. Click **Display**. WebSPIRS displays the index.

Select and search terms as in the free-text index.

---

## Detailed Search Information

---

### *Search Examples*

Below are the types of searches you can use on the Search screen.

- Term: `dyslexia`
- Term with truncation or wildcards: `comput*`, `colo?r`
- Previous search request number: `#3`
- Number, in quotes if equal to previous search number: `1989`, `"2"`, `"#5"`
- Letters and numbers combined: `3m`
- Phrase: `new york city`
- Phrase with hyphens: `drug-abuse`
- Phrase with operator in quotes: `"near" death experience`
- Term or phrase limited to a field: `smith in au`
- Multiple terms combined with operators: `dog or puppy or canine`
- Multiple terms separated by semi-colons: `heart;lung;liver`
- Any of the above, grouped with parentheses for clarity: `(dog or 1) near puppy`

---

### *Online Help*

WebSPIRS Help provides specific help for every WebSPIRS page, introductory information and procedural instructions. There is also a Guide for each selected database.

#### **For help on a WebSPIRS page:**

While displaying a WebSPIRS page, click the  button.

**For help on a specific topic:**

Display a help page, scroll to the bottom of the page. WebSPIRS has links to the Help Index and Help Contents.

The *Help Index* is a list of WebSPIRS help topics.

The *Help Contents* is a Table of Contents of the WebSPIRS help topics.

**Guide to the Database:**

Each SilverPlatter database has a unique Guide containing information specific to that database. The Guide always includes a list of fields with their descriptions and sample searches. It can also include explanations of any special features of the database or lists of codes and keywords used.

You can access the Guides of all the databases you are searching from every Help page. From any WebSPIRS page, click **Help** on the button bar and scroll to the bottom of the Help topic.

---
